

SET UP IN 4 STEPS

1 Open

Launch it → opens at
`localhost:8080`

2 Choose app

Click
Open
on Mighty or TMRW

3 Point at source

Local folder /
Bitbucket · Country ·
version

4 Analyse

Press
Analyse modules
— you're set

THE THREE TABS — EACH ANSWERS ONE QUESTION

Release Scope

"What does this API touch?"

Best for: planning a release's footprint.

HOW

1. Blank = full catalog, or type a **version**
2. Read the **flow graph** — routes & backends

YOU GET

- Interactive flow diagram (svc versions)
- Impacted-API catalog

SHARE

PDF catalog

PNG graph

Release Test

"Did the release actually work?"

Best for: sign-off that the release ran.

HOW

1. Select APIs
2. Run the **Splunk query** or upload a log
3. **Verify with logs**

YOU GET

- Pass/fail per API + status donut
- Backend breakdown & version check

SHARE

PDF verification

Capability Matrix (Excel)

Release Impact

"What changed since last release?"

Best for: go / no-go on what changed.

HOW

1. Enter **target version** → **Compare**
2. Add commit version for code/BAU changes

YOU GET

- Added / removed / changed routes
- Risk + backward-compatibility flags

Detailed PDF

READING A VERDICT

● **Success** — every flow passed ● **Partial** — some flows untested ● **Failed** — a call failed

● **Not tested** — no logs seen

⚙️ Config — set once (saved on your machine)

Splunk base URL — log download links

VAL reports — Interface Spec + Capability Matrix

Bitbucket / npm tokens — clone & build

🚦 **Rules** — custom backend success codes

Good to know

- Two apps — **Mighty & TMRW** — traced separately.
- Only `git` is required, and only for Release Impact.
- Multi-module runs consolidate into one pack (incl. an **ALL** Excel tab).
